MOTO GUZZI BIG TWINS

With its massive twin cylinders splayed at 90 degrees across the frame, shaft drive, and distinctive exhaust note, no motorcyclist ever mistakes a Moto Guzzi for anything else. From the V700 of 1967 to today's V11 Sport, V10 Centauro, and V11 EV, Moto Guzzi has staked out a unique niche among high-performance two-wheelers.

Moto Guzzi Big Twins is based on countless hours of groundbreaking research including interviews with legendary Guzzi designers and engineers such as Giulio Carcano, Umberto Todero, Lino Tonti, and Dr. John Wittner. Author Greg Field's text separates fact from fiction to tell the real story of the design and development of all the great Guzzi big twins. More than 120 color and historic black-and-white photographs and advertisements—many of them from Moto Guzzi's archives—illustrate this fascinating story.

Moto Guzzi Big Twins is the essential book for all fans of this classic Italian marque.
